Portfolio

PROFILE

Junior software developer focused on developer tooling, workflow checks and data quality. I define expected behaviour, use AI coding assistants for implementation and review code, tests and observed results. I am seeking my first role with scoped tasks and code review.

SELECTED PROJECTS

API Contract Guard

TypeScript, Node.js, OpenAPI

Local CLI comparing five categories of API contract changes, with JSON/HTML reports and explicit rejection of unsupported inputs. Defined the supported checks and expected reports; reviewed the assisted implementation and test cases. Published validation records 102 local tests.

ToolCall Replay

JavaScript browser demo; Python, pytest evaluator

Browser demo evaluates editable synthetic JSONL traces against seven supported rule types; it executes no tools or models. The separate local Python evaluator and selected tests are available in the public source snapshot.

Entity Resolution Workbench

Python, pytest, record matching

Local matcher that returns MATCH, REVIEW or NO_MATCH with visible reasons. Public source snapshot includes synthetic catalogues and selected tests. Similarity scores are not business accuracy claims.

EXPERIENCE

Delhaize, Brussels

Student employee | 2020 - 2022

Coordinated daily tasks with colleagues and helped organise the team when the manager was absent.

Volunteer tutor

2020 - present

Explain mathematics, science and business topics in clear steps, adapting to the learner.

EDUCATION & CERTIFICATION

OPIT | BSc (Hons) Computer Science, online

Online course began in September 2026. Studying alongside my search for full-time work.

Institut Technique René Cartigny | CESS | June 2025

Completed Belgian upper-secondary education, polyvalent mechanics.

HackerRank: SQL Advanced and Python Basic, September 2026.
IBM Data Science Professional Certificate · IBM / Coursera · 21 October 2026
IBM RAG and Agentic AI Professional Certificate · IBM / Coursera · 20 October 2026
French: main language | Albanian: native | English: EF SET 77/100, C2 overall (18 September 2026).

TOOLS USED WITH AI ASSISTANCE

Python, TypeScript/JavaScript, SQL, React, FastAPI, REST APIs, PostgreSQL, Git, Docker, pytest, Playwright and GitHub Actions.
