PROFILE

I build developer tools and web projects with AI assistance and am looking for my first software role with mentoring and code review. I understand code, but I do not yet write it independently. I use Claude, Cursor, ChatGPT and Codex to work through scoped tasks, review the result and check its behaviour. Full-time availability; remote from Belgium or employer-funded relocation.

SELECTED PROJECTS

API Contract Guard

TypeScript · Node.js · OpenAPI · 102 local tests

Help developers identify API changes that could break an existing integration. I defined the supported checks and expected reports, then reviewed the implementation and tests with AI assistance. The local tool covers five change categories with 102 recorded tests; other OpenAPI features are outside scope.

Synthévia

React · TypeScript · FastAPI · PostgreSQL · Public demo

A web workspace for market information, risk tools and learning. I define the product needs and coordinate the AI-assisted implementation and reviews. Visitors can explore a demo with fictional data. The separate local code sample uses SQLite; no trading profitability is established.

EvidenceDesk

React · FastAPI · PostgreSQL · Redis · Synthetic data

Help a reviewer check an answer against its source document. I framed the citation and abstention workflow and iterated with coding assistants. The evaluation retrieved a relevant passage in 25/25 answerable examples, but only 9/25 answers were correct (36%). The failed evaluation remains documented.

EXPERIENCE

Volunteer tutor

Brussels · 2020-present

Mathematics, science and business. I break unfamiliar topics into clear steps and adapt explanations to the learner.

Student retail assistant · Delhaize

Brussels · 2020-2022

Worked reliably with customers, procedures and a team during busy shifts while studying.

EDUCATION & CERTIFICATION

OPIT · BSc (Hons) Computer Science, online

Admitted for September 2026; classes start on 21 September. Online studies planned alongside full-time work, with a flexible study schedule and working hours to agree with the team.

ICHEC Brussels · Business Management

Completed part of first year in 2025-2026 before changing direction toward software.

Google AI Professional Certificate · Coursera · May 2026

French (main language) · Albanian (native) · English B2 (self-assessed)

TOOLS USED WITH AI ASSISTANCE

AI assistants: Claude (around 18 months), Cursor, ChatGPT, Codex. Used with AI assistance: Python, TypeScript/JavaScript, SQL, React, FastAPI, PostgreSQL, Git, Docker, Linux, pytest, Playwright, GitHub Actions. Introductory n8n.
