

PROFILE

Junior software candidate based in Brussels, moving from business studies into software and applied AI. I use coding assistants to turn a clear brief into working prototypes, then inspect the result, run tests, reproduce failures and document the limits. I understand the code I deliver while continuing to strengthen my independent coding and computer-science foundations. I am looking for a first professional team where I can contribute and learn through review.

SELECTED PROJECTS

API Contract Guard

TypeScript · Node.js · OpenAPI · 102 local tests

A bounded command-line tool for comparing a defined OpenAPI subset. I set the supported change categories, expected reports and failure boundaries, then reviewed the AI-assisted implementation and test cases. It covers five documented breaking-change categories and fails closed outside scope.

EvidenceDesk

React · FastAPI · PostgreSQL · Redis · Synthetic data

A document-review prototype that links answers to supporting pages and can abstain when evidence is missing. Recall@5 reached 100% on 25 of 25 answerable synthetic cases; the wider answer evaluation did not pass (36% accuracy and 45.67% extraction F1), so the limit remains visible.

PostgreSQL Migration Rehearsal

PostgreSQL · Docker · Python · Local synthetic rehearsal

A local practice project for migration planning, rollback checks and data-integrity checks. It uses synthetic data and is presented as a rehearsal, not as proof of production experience.

EXPERIENCE

Volunteer tutor

Brussels · 2020–present

Mathematics, science and business. I break unfamiliar topics into clear steps and adapt explanations to the learner.

Student retail assistant · Delhaize

Brussels · 2020–2022

Worked reliably with customers, procedures and a team during busy shifts while studying.

EDUCATION & CERTIFICATION

OPIT · BSc (Hons) Computer Science
Admitted for the September 2026 intake; enrolment pending. Online study planned alongside full-time work.

ICHEC Brussels · Business Management
Completed part of first year in 2025–2026 before changing direction toward software.

Google AI Professional Certificate
Coursera · May 2026

Languages
French native · Albanian native/bilingual · English B2 (self-assessed)

WORKING WITH

Python · JavaScript · TypeScript · SQL · HTML/CSS · FastAPI · React · REST/OpenAPI · PostgreSQL · Redis · pytest · Vitest · Playwright · Ruff · mypy · Git/GitHub Actions · Docker · Linux · debugging · documentation
