PROFILE

I am looking for my first software role in a team where I can contribute and learn. I understand code, but I still need AI assistance to write it. I use coding assistants to build projects, then run the result, test its behaviour and work through problems. I am improving both my coding fundamentals and the way I use AI. I am available for full-time work, with online studies planned alongside.

SELECTED PROJECTS

API Contract Guard

TypeScript · Node.js · OpenAPI · 102 local tests

A bounded command-line tool for comparing a defined OpenAPI subset. I set the supported change categories, expected reports and failure boundaries, then reviewed the AI-assisted implementation and test cases. It covers five documented breaking-change categories and fails closed outside scope.

EvidenceDesk

React · FastAPI · PostgreSQL · Redis · Synthetic data

A document-review prototype that links answers to supporting pages and can abstain when evidence is missing. Recall@5 reached 100% on 25 of 25 answerable synthetic cases; the wider answer evaluation did not pass (36% accuracy and 45.67% extraction F1), so the limit remains visible.

Synthevia

React · TypeScript · FastAPI · SQLite

A local learning and research workspace built with AI assistance. The public sample connects a React interface to a FastAPI backend and SQLite data. It uses fictional data; external services are not connected.

EXPERIENCE

Volunteer tutor

Brussels · 2020–present

Mathematics, science and business. I break unfamiliar topics into clear steps and adapt explanations to the learner.

Student retail assistant · Delhaize

Brussels · 2020–2022

Worked reliably with customers, procedures and a team during busy shifts while studying.

EDUCATION & CERTIFICATION

Planned online computer science studies

Planned alongside full-time work; institution not yet finalised.

ICHEC Brussels · Business Management

Completed part of first year in 2025–2026 before changing direction toward software.

Google AI Professional Certificate · Coursera · May 2026

French (main language) · Albanian (native) · English B2 (self-assessed)

TOOLS USED WITH AI ASSISTANCE

Python · JavaScript · TypeScript · SQL · HTML/CSS · FastAPI · React · REST/OpenAPI · PostgreSQL · Redis · pytest · Vitest · Playwright · Ruff · mypy · Git/GitHub Actions · Docker · Linux · debugging · documentation
