Open application | Junior software developer

Dear Hiring Team,

I am applying for a junior software development role. My personal projects focus on API checks, document review and web applications. I am looking for a team where I can work on scoped development tasks with code review and practical feedback.

API Contract Guard compares a defined subset of OpenAPI contracts. I defined its supported checks and expected reports, then reviewed the AI-assisted implementation and test cases. These personal projects give us concrete examples to discuss, including the assistance used and the limits of each result.

I use coding assistants for implementation and continue to develop programming independence. I would be glad to walk through a project, explain its decisions and work through a suitable technical exercise. My earlier retail work and volunteer tutoring also gave me experience coordinating tasks and explaining unfamiliar topics.

I am based in Brussels and looking for full-time remote work from Belgium. I have been admitted to OPIT's online BSc (Hons) Computer Science, starting on 21 September 2026, and plan to study alongside work. My English is certified at EF SET C2 overall (77/100). I can discuss the working hours and support needed for a first role.

Thank you for your time,

Ardian Mehaj
